

Mission Configurable Self Protection Solutions

Christer Zätterqvist
September 14 2011

-

The problem in a nutshell

- ▶ Plethora of threat types
- ▶ Threat type Center of Gravity changes with phase of conflict
- ▶ Limited platform flexibility to effortlessly receive new capabilities
- ▶ Current airborne EW systems does not address all relevant threats
- ▶ Industry (and user) tend to dig in the same ditch

The million \$ question is: *What do we do about it?*

Survivability

► The mission

- Increased Aircraft Combat Survivability (P_S)
 - Susceptibility to threats (P_H)
 - Threat vulnerability ($P_{K|H}$)
 - Maximizing $P_S = 1 - P_H P_{K|H}$ (1- Susceptibility * Vulnerability)
- Increased combat effectiveness
- Achieve as many successful landings as take-offs...

Survivability enhancement factors

➤ Preventive / Tactical

- Arms control
- Port and border security

➤ Tactics

- Flying tactics and operating procedures
- Speed / altitude
- Situational awareness
- ConOps

➤ Technical

- Hardening of structure
- Ruggedized airframe
- Blast protection
- Signature reduction
- System redundancy
- Countermeasures

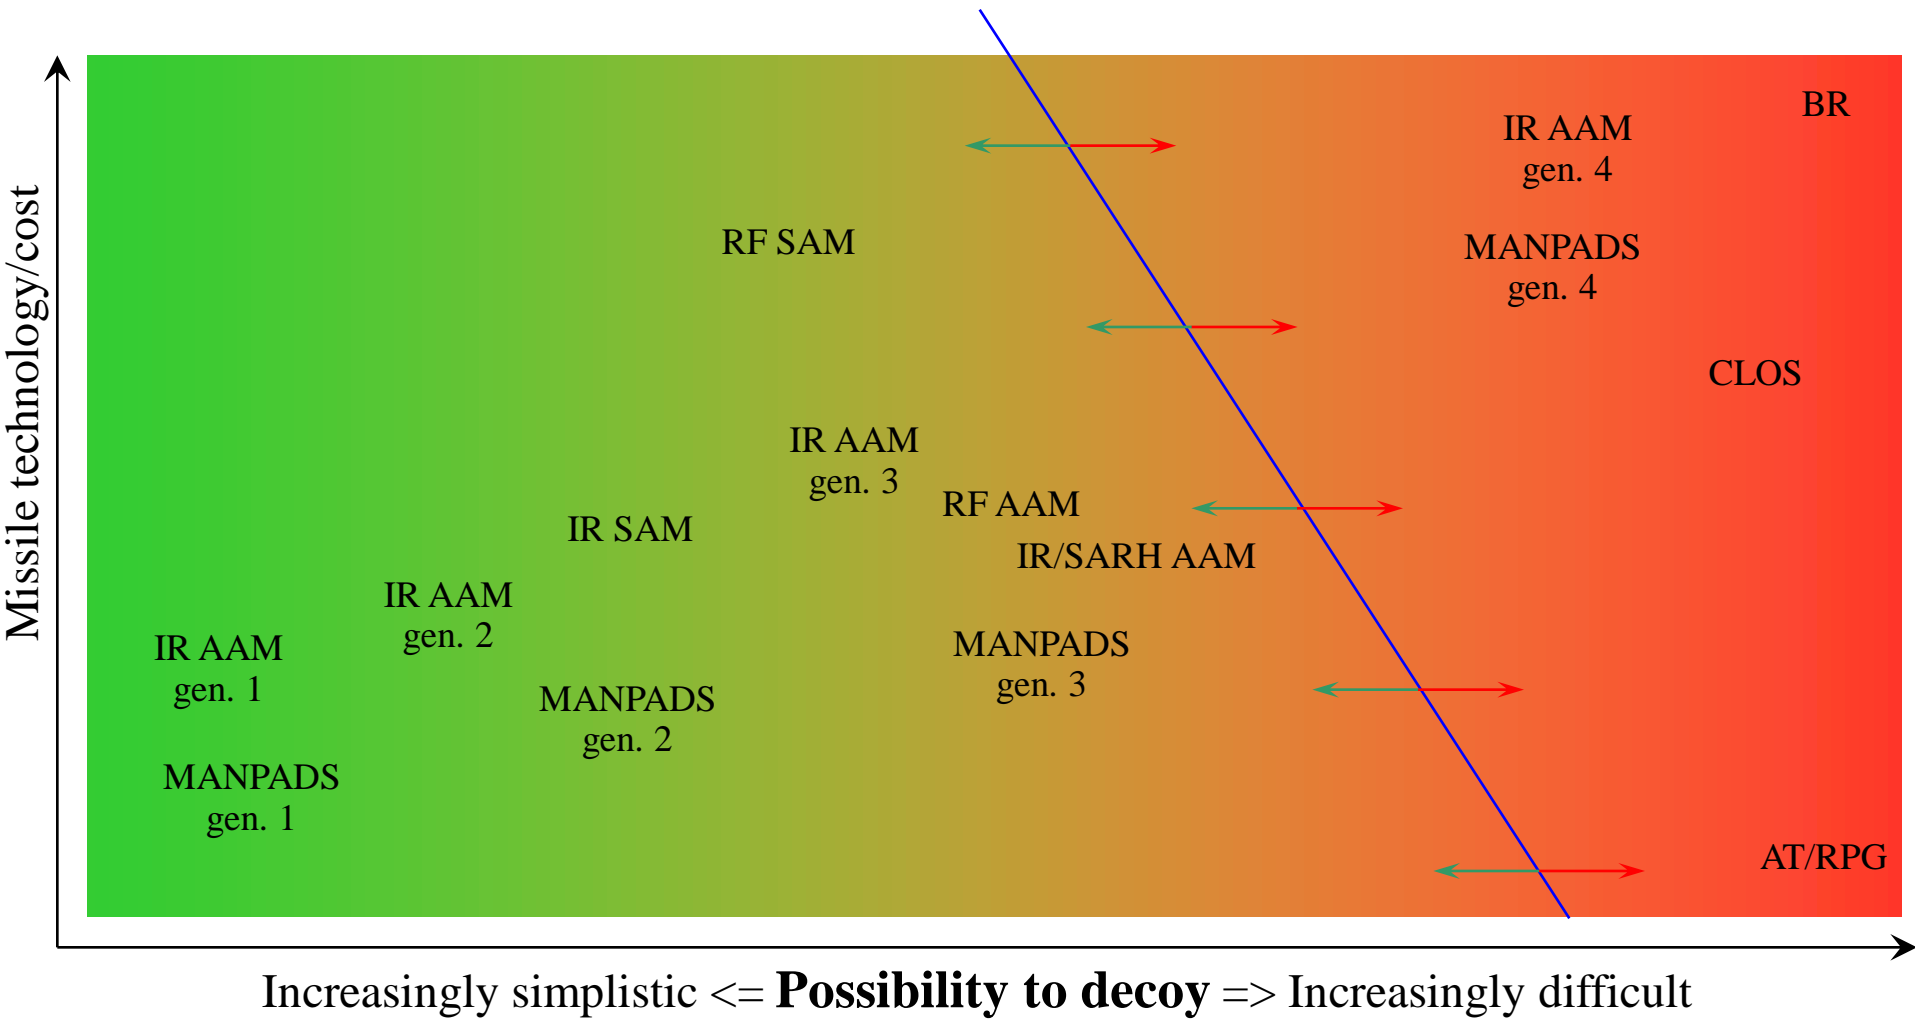

Type of threats

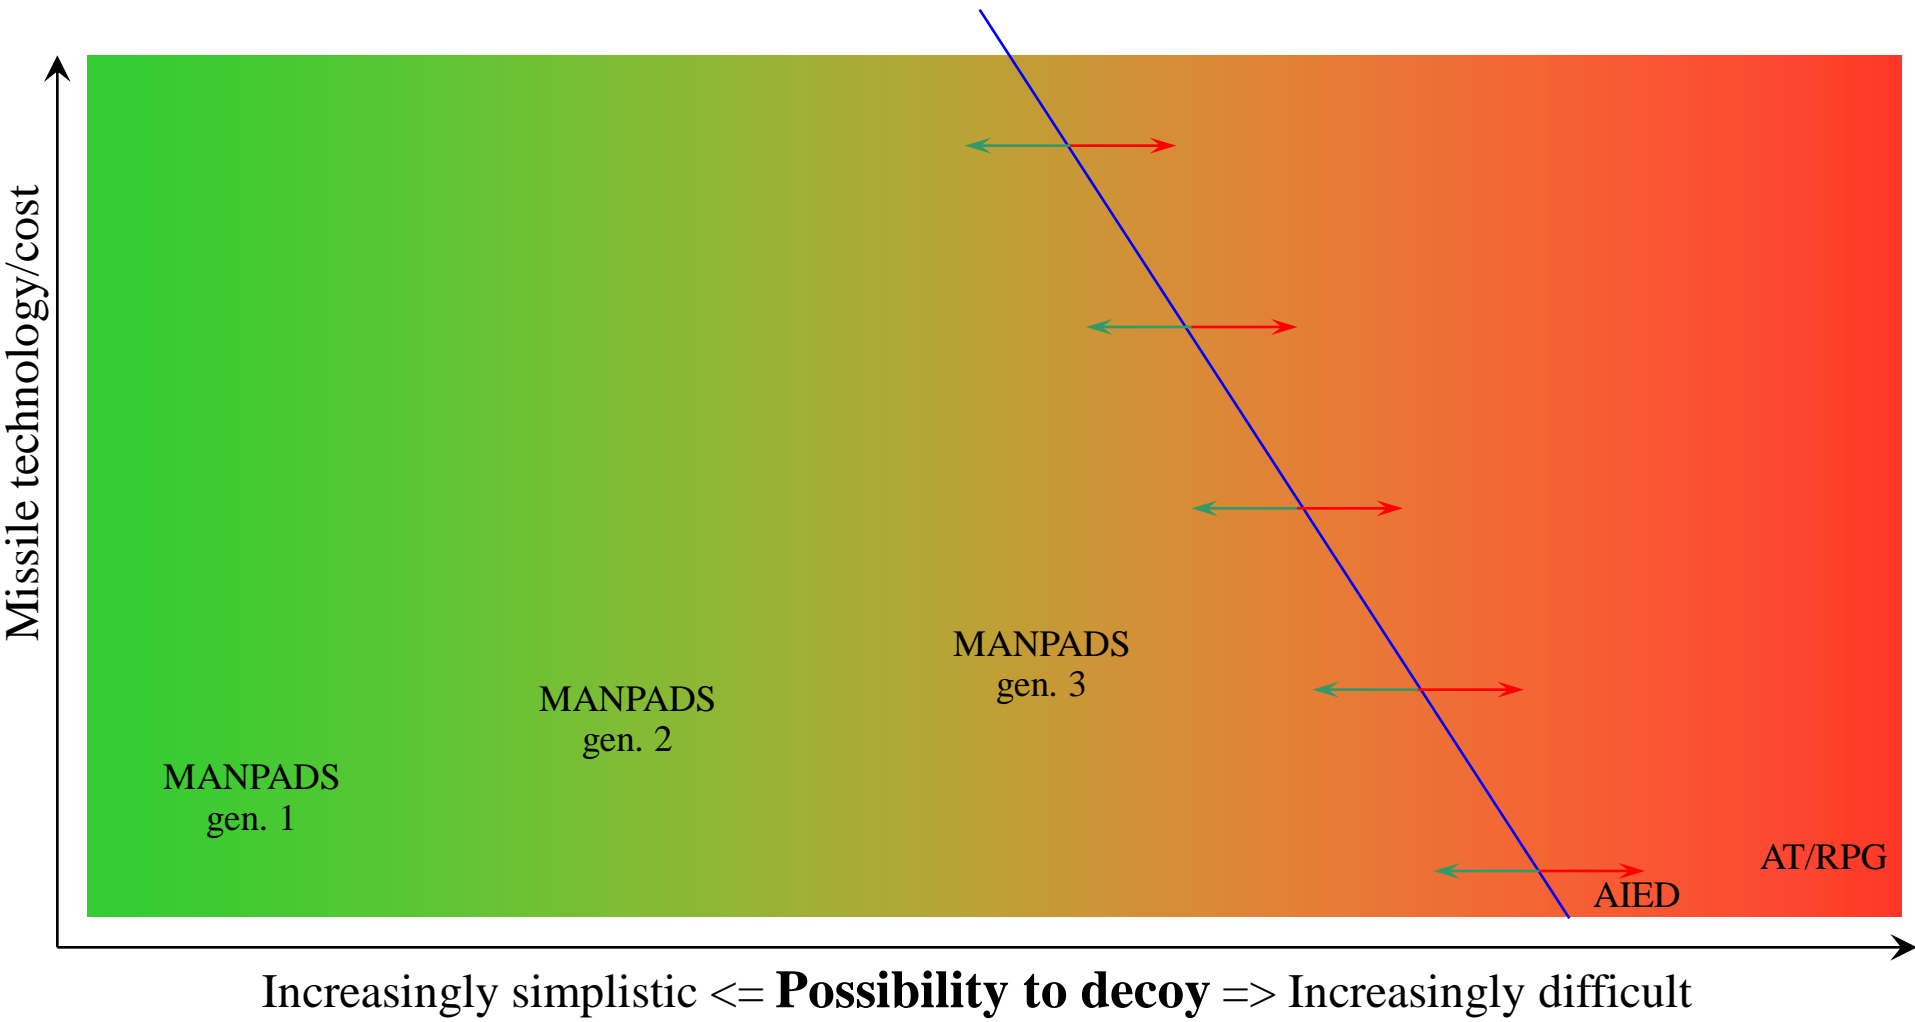

- ▶ Small arms
- ▶ MANPADS (SA-7, SA-14, SA-16, SA-18, HN-5, FN-6)
- ▶ IR AAM (AA-8, AA-11)
- ▶ IR SAM (SA-9, SA-13)
- ▶ RF AAM (AA-9, AA-12)
- ▶ RF SAM (Command type, SA-2, SA-3, SA-4, SA-5, SA-6, SA-8, SA-10, SA-15)
- ▶ IR/RF AAM (also IR/SARH Semi Active Radar Homing, AA-2, AA-6, AA-7, AA-10)
- ▶ CLOS (LLTV, Wire, Radar, Radio)
- ▶ Beam riders
- ▶ AT/RPG (RPG-7)
- ▶ AIED

Outset of conflict

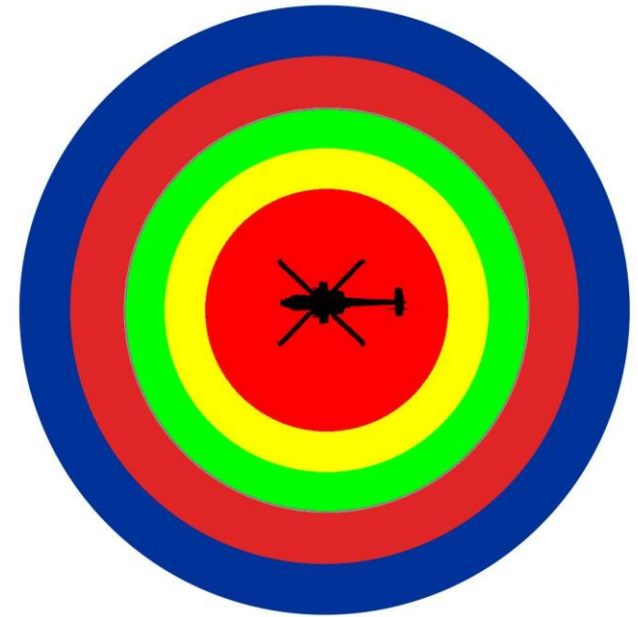

A bit into (recent) conflicts

The desired EW toolbox

- Missile warning
- Laser warning
- Radar warning
- Hostile fire indication
- Reactive dispensing (chaff and flare)
- Pre-emptive dispensing (chaff and flare)
- Post-emptive dispensing (chaff and flare)
- RF jamming
- Directed energy system
- Hardkill system

Layers of protection

How do I get my fantastic gizmo installed on the Aircraft?

A few pieces of the puzzle

▶ Interfaces

- Mechanical
- Control
- Power
- HMI

▶ Incompatibility drives cost and schedule

Commercial example to the contrary

Addressing the issues

Example of Initiatives

- ▶ BOL
- ▶ BOH
- ▶ TIPS

BOL in missile launcher

Prototype BOH-300

BOL

- Operational in several Air Forces
- Electromechanical dispensing
- Installable into;
 - Launcher
 - Conformal housing
 - Pylon
 - Vacant external store volume
- Reactive dispensing
- Pre-emptive dispensing
- Post-emptive dispensing
- Combat proven
- > 2000 BOL Dispensers delivered, still counting..

BOL track record

Tornado

Saab 2000 AEW&C

Gripen

F-15 Eagle

F-18 Hornet

EF-2000 Typhoon

Retired platforms

F-14 Tomcat

Viggen

Harrier

Addressing the cost / schedule issues

BOL

▶ Interfaces

- Mechanical
- Control
- Power
- HMI

▶ Installable into;

- Launcher
- Conformal housing
- Pylon
- Vacant external store volume

▶ Control means

- Discrete signals
- MIL-STD-1553
- RS-485
- (wireless if needed..)

▶ Power

- 115VAC / 400 Hz
- 28 VDC in the works

▶ HMI

- External BIT indication
- Dovetail into existing CMDS architecture

BOL Dispensing

Typical pre-emptive sequence for twin-engine A/C

Example:

$$N_e = 4$$

$$T_e = xx \text{ ms}$$

$$N_b = 3$$

$$T_b = xx \text{ ms}$$

BOL mechanism

Theory of operation

BOL decoys

BOL Chaff Packs

BOL IR Packs

BOL chaff

► Characteristics

- Electromechanically dispensed
- Individually packed
- Affordable
- Safe to handle
- Superior effectiveness
- $>10 \text{ m}^2$ RCS all frequencies
- $>10 \text{ m}^2$ doppler content
- Frequency coverage 2-18 GHz

BOL chaff

- Chaff dispensed from the wings use the vortices to enhance RCS build and to generate Doppler contents

BOL chaff

BOL IR

► Characteristics

- Electromechanically dispensed
- Pyrophoric
- Covert, almost
- NVG compatible
- Individually packed
- Mechanically dispensed
- Safe to handle
- Superior effectiveness

BOL IR

▶ IR

- Pre-emptive
 - Effective for both ground based (MANPADS) and airborne (AA) threats
 - Avoid missile acquisition (Acquisition denial)
 - Missile tracks IR energy in decoy, decoy cools → missile reattempt to acquire

Pre-emptive dispensing

BOL IR

Dispense from F-14

US GOVERNMENT DISCLAIMER

NO COMMITMENT IS BEING MADE

OR IMPLIED WITHIN THIS VIDEO

ON THE US GOVERNMENT'S

WILLINGNESS TO SELL

THIS EQUIPMENT

OR TO PROVIDE

INFORMATION BEYOND

THE SCOPE OF

THIS PRESENTATION

Cleared for Public Release 31 OCT 2003 by Public Affairs Office, Naval Air Systems Command

BOL IR

Dispense from S-3

BOH, the idea

- ▶ In the leanest possible way provide additional advanced countermeasures capability
- ▶ Use the same electrical and hardware interfaces common missiles
- ▶ Facilitate carriage on missile launchers
- ▶ Adapter to allow mounting using 14” or 30” NATO lugs
- ▶ Incorporate mature technologies
 - BOL electromechanical dispenser
 - Forward firing (pyrotechnical) dispenser
 - Missile Approach Warning
- ▶ Reuse existing technology, products, modules and building blocks to minimizing development cost/lead-time and risks

On a mission-to-mission basis, BOH is a “missile-replacement” providing EW capability

System building blocks

- ▶ BOL (electromechanical RF and IR dispenser)
- ▶ IDAS (Integrated Defensive Aids Suite)
 - EWC (controller)
 - MAW (Missile Approach Warner)
 - LWS (Laser Warner Sensor)
 - BOP (Pyrotechnical dispenser)
 - SPU (Safety Pin Unit)

BOL

EWC

MAW

LWS

BOP

SPU

IDAS

Main BOH configurations and layout

Prototype BOH-200

Config#	Nose	Front module	Center module	Aft module
BOH-100	Fairing*	-	SPU, EWC	BOL
BOH-200	Fairing*	BOP	SPU, EWC	BOL
BOH-300	MAW*	BOP	SPU, EWC	BOL

* GPS optional

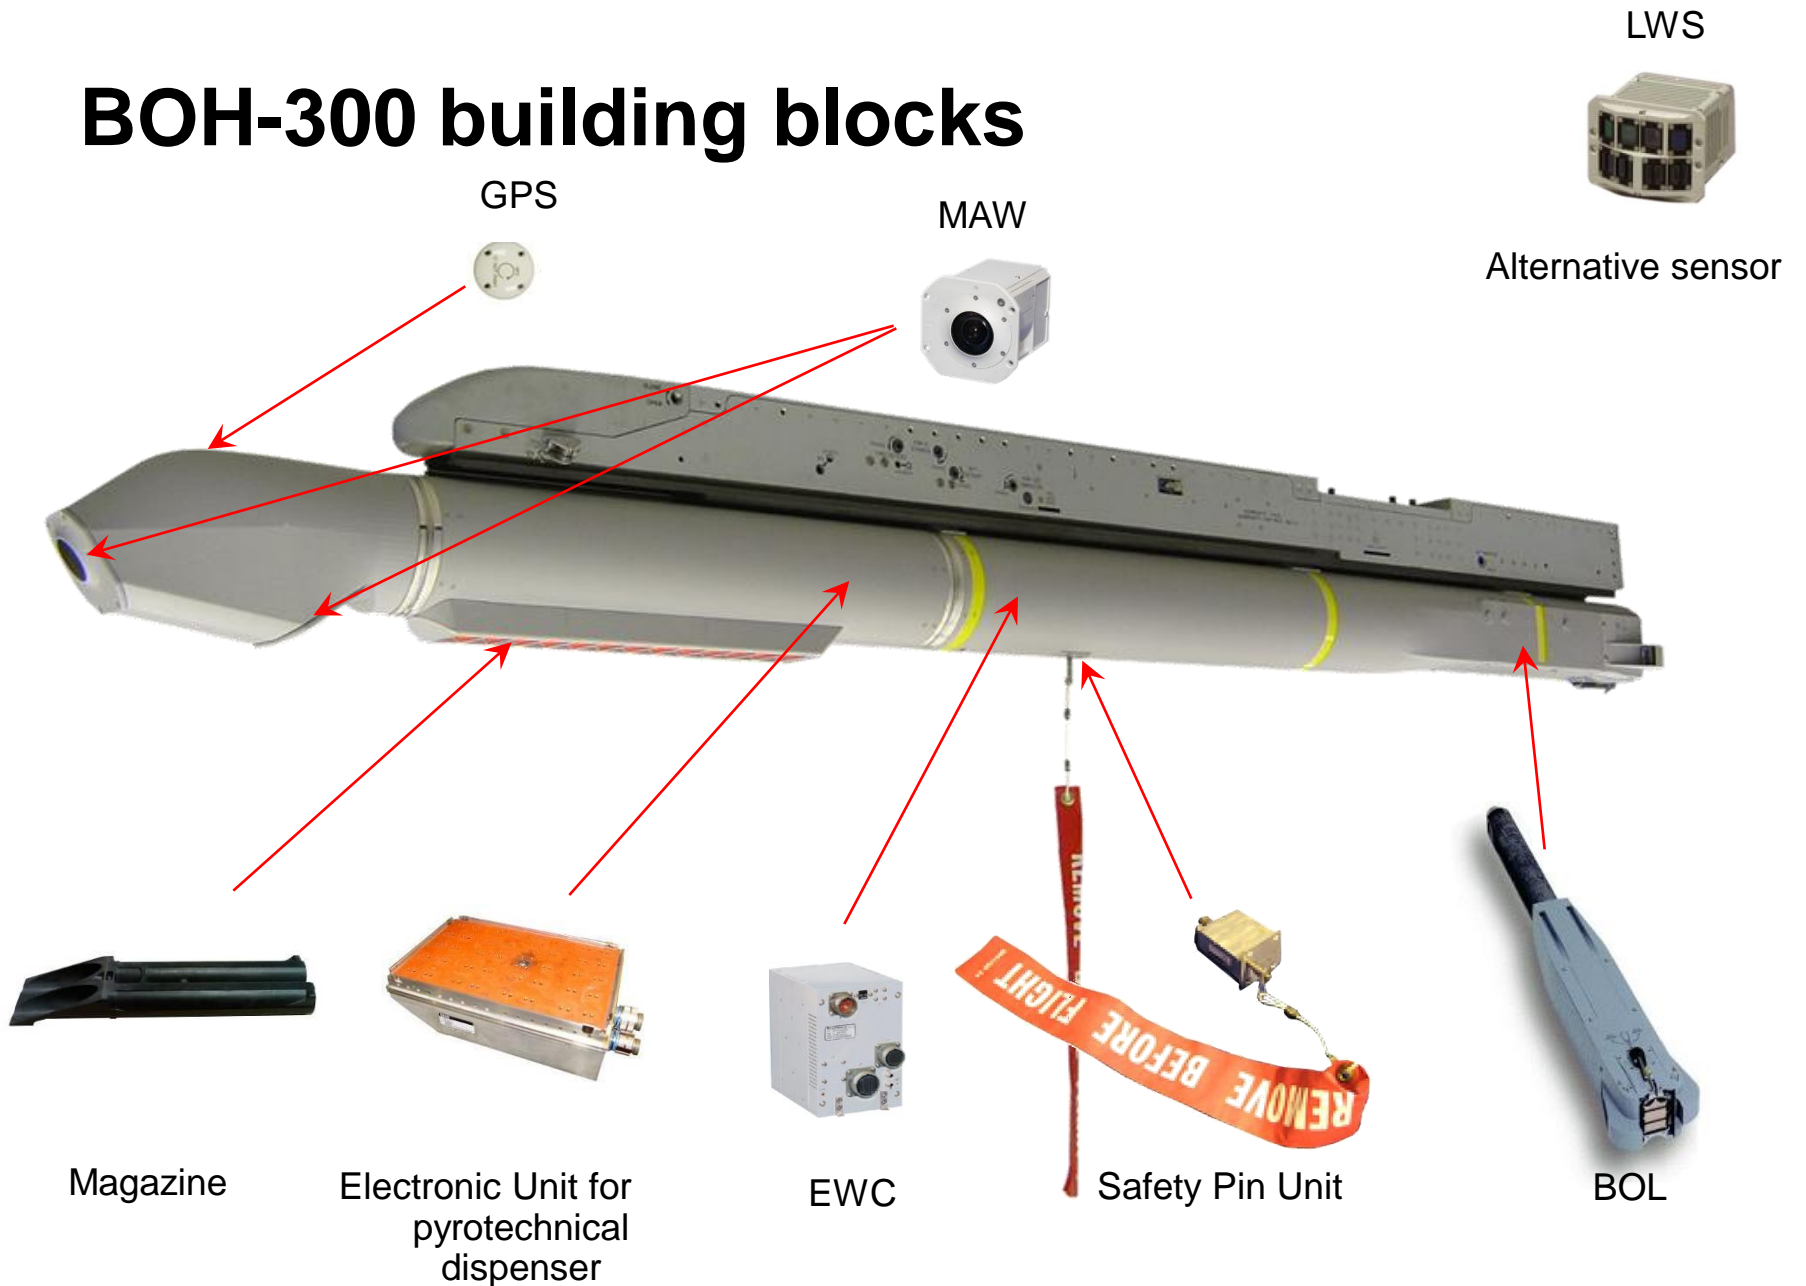

Prototype BOH-300

BOH-200 building blocks

BOH-300 building blocks

Addressing the cost / schedule issues

BOH

▶ Interfaces

- Mechanical
- Control
- Power
- HMI

▶ Installable any missile launcher;

- LAU-7, LAU-120 series, MML etc. etc.

▶ Control means

- Autonomous (if mode selected)
- Discrete signals
- MIL-STD-1553 (weapons MUX Bus)
- RS-485
- (wireless if needed..)

▶ Power

- 115VAC and 28 VDC (missile power)
- RAT coming

▶ HMI

- External BIT indication
- Dovetail into existing CMDS architecture
- Integration via SW

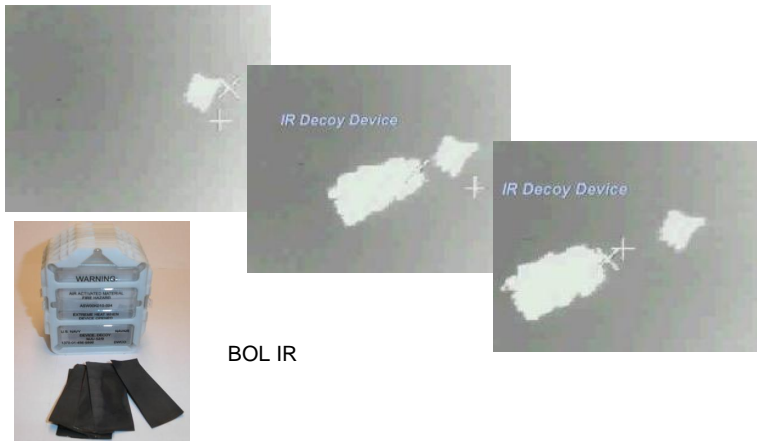

BOH decoys

BOL Chaff

No. 218 K7 Type 1 propelled flare

BOL IR

Standard 118 size

Standard 218 size

BOZ EC trials

BOZ EC trials

BOH on USAF LAU-129 Launcher (for F-16)

TIPS

- ▶ A new initiative for an airborne hardkill capability
- ▶ Philosophy; “Defeat incoming threats regardless of guidance technology, if guidance is at all installed”
- ▶ Product status: Feasibility assessment

Threat characteristics

Threat characteristics

▶ Threat characteristics

- Highly transportable
- Portable by a single person
- Designed to fly...
- On-board propellant
- Similar physical attributes
- Similar in-flight velocity

▶ TIPS to counter threats with the following parameters

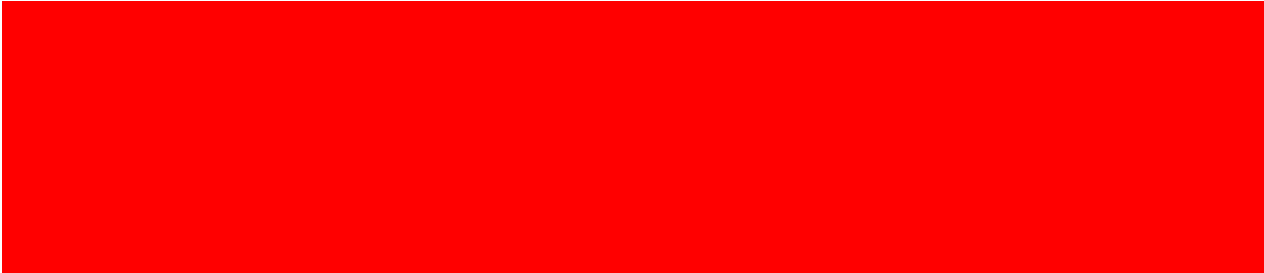

- Speed: 80 – [redacted] m/s
- Mass: 1,9 – [redacted] kg
- Body/warhead diameter: 40 – [redacted] mm
- Altitude: 0 – [redacted] m
- Range to shooter: [redacted]* – 5000 m

* Envisioned minimum

Considering existing platform infrastructure

- ▶ It is desirable to utilize existing platform EW system to the greatest possible extent
 - Philosophy; “Add a new component or function to an EW system and have it work seamlessly with a minimum of required changes to existing system”
 - Considering above aspects results in the following approach for TIPS
 - Already installed Missile Approach Warner system shall be used to detect and declare an incoming threat
 - Already installed CMDS shall be used as infrastructure to launch TIPS interceptor(s)
 - Already installed safety logic (safety pin(s) and WoW) shall be used

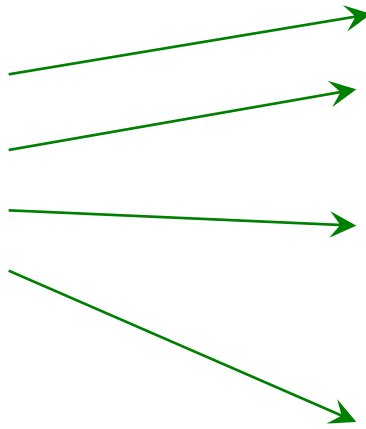

TIPS, what is it?

- ▶ Threat Independent Protection System (TIPS*) is not a standalone system but rather new components which are installable into the existing EW system complementing the chaff and flare capability with the introduction of a guided Interceptor adding the capability to defeat threats like RPG's
- ▶ TIPS components
 - 
 -
 -
 -
- ▶ Required updates to existing EW system
 - SW update in the MAW system to feed data to Interceptors via Transceiver
 - Update to the CMDS Mission Data File to consider the new "loadtype"

The new magazine with Interceptors is "just another loadtype" in the CMDS architecture

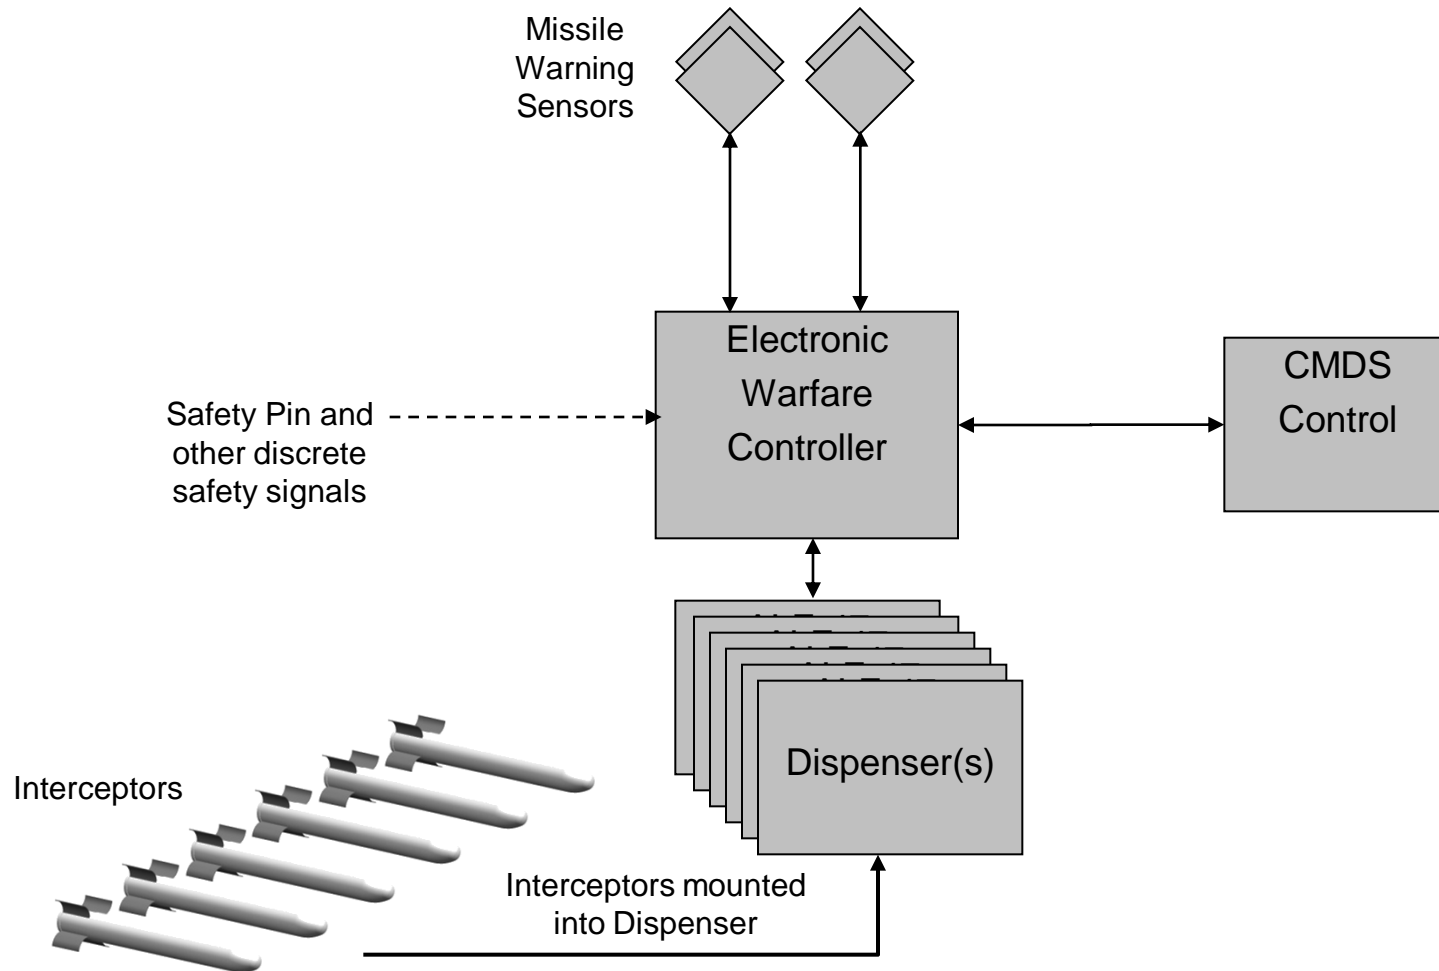

Addressing the cost / schedule issues

TIPS

- ▶ Interfaces
 - Mechanical
 - Control
 - Power
 - HMI
 - ▶ Installable into existing dispensers
 - ▶ Control means
 - Autonomous mode
 - ▶ Power
 - Power via dispenser
 - Internal power pack
 - ▶ HMI
 - External BIT indication
 - Dovetail into existing CMDS architecture
- 

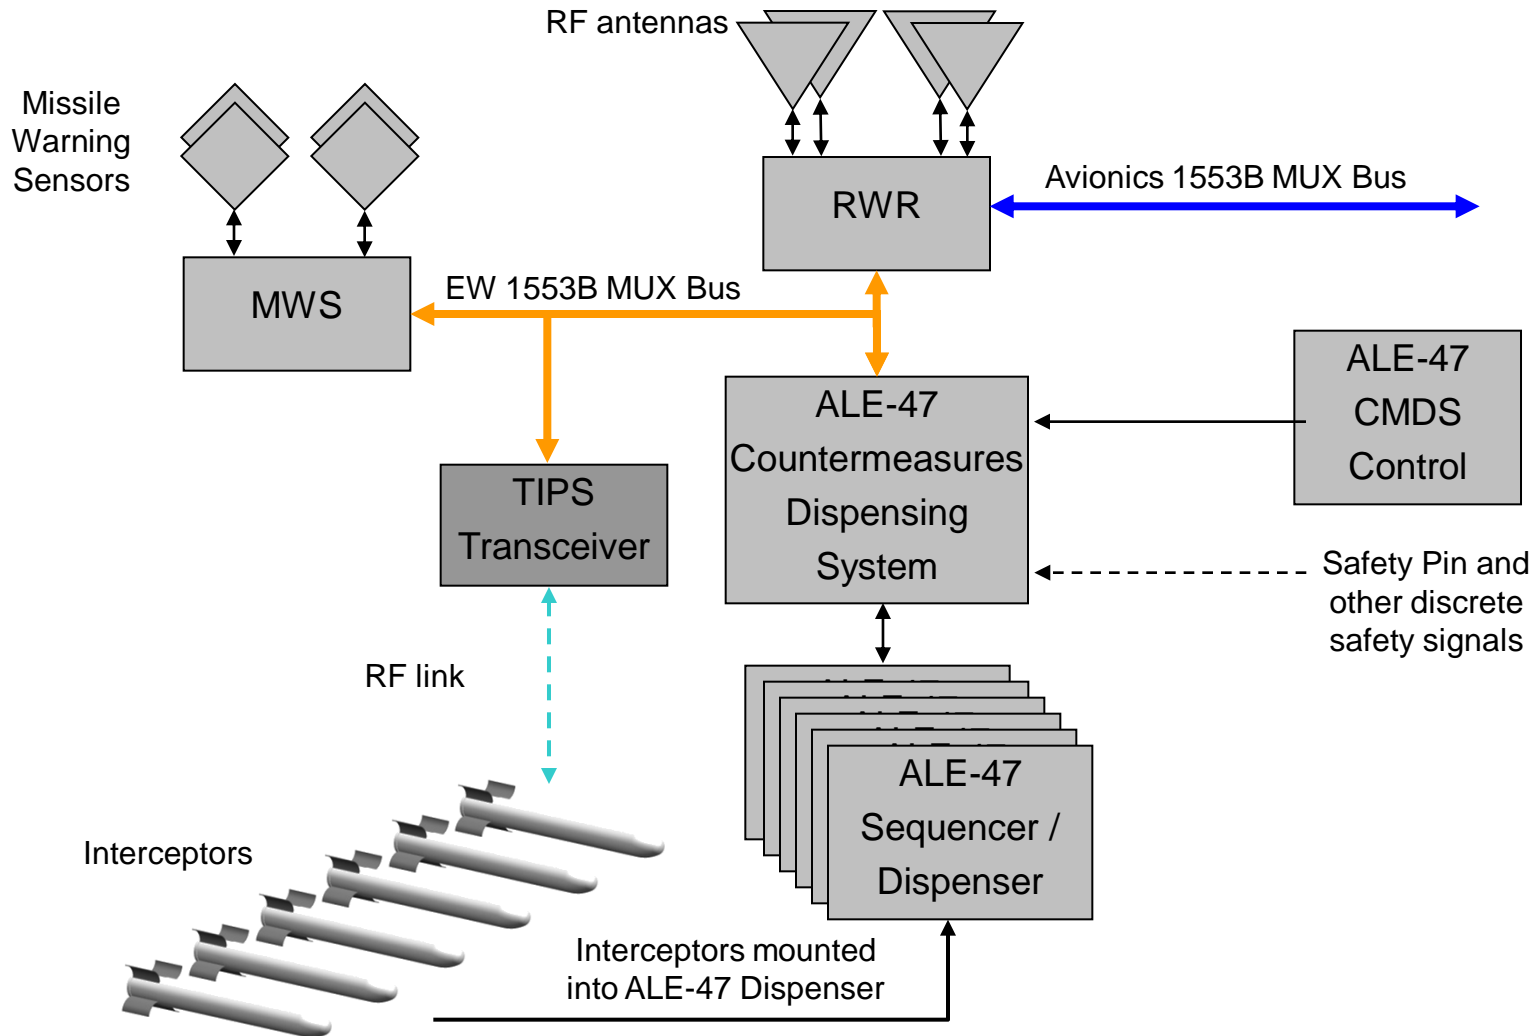

TIPS dovetailing in with IDAS

Example, simplified block diagram

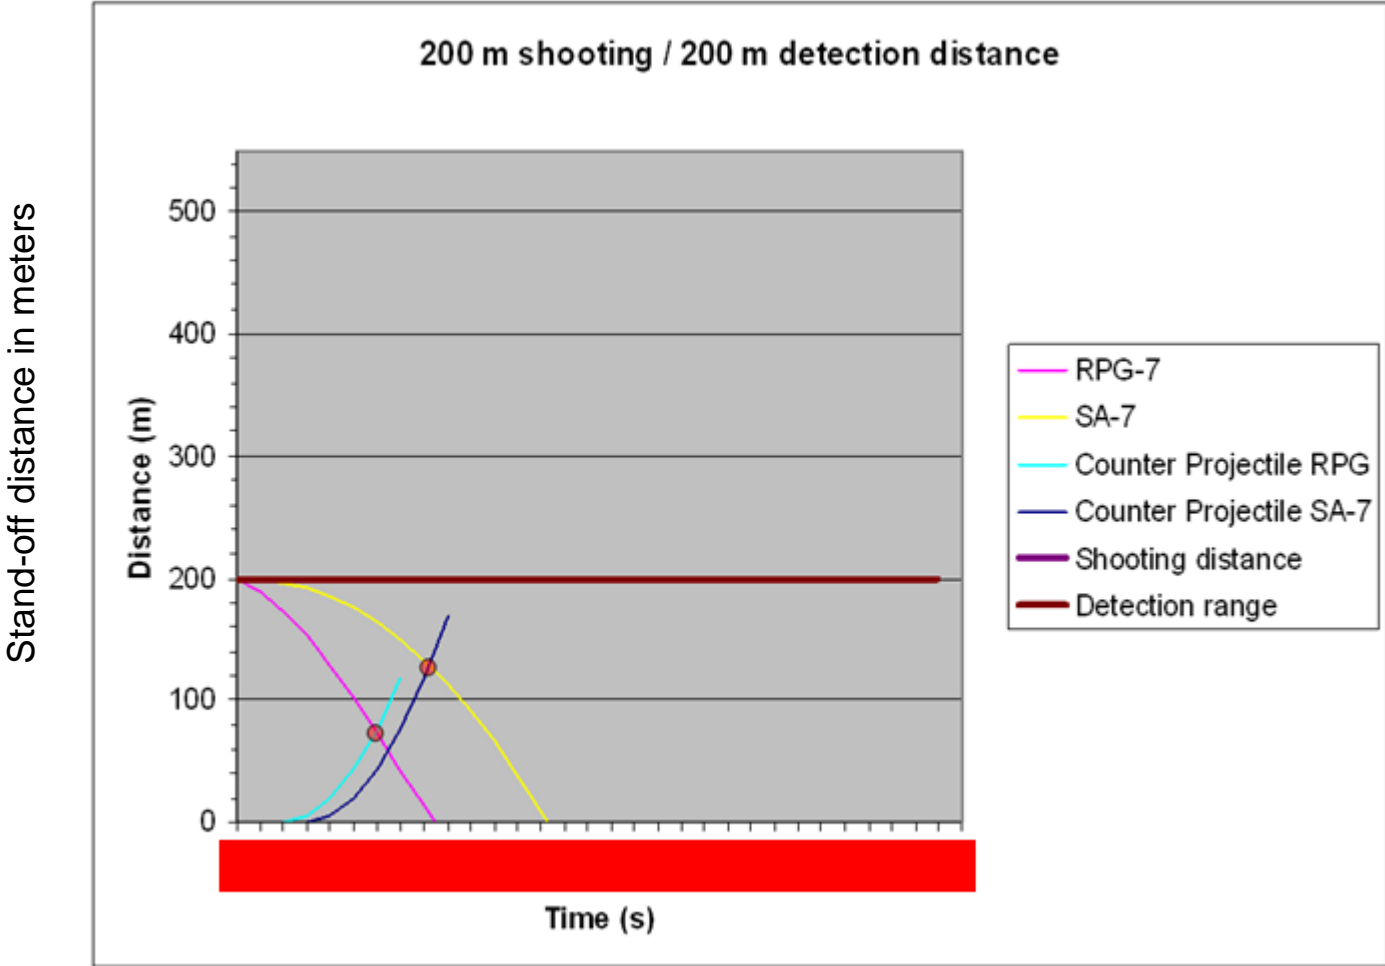

TIPS dovetailing in with ALE-47

Example , simplified block diagram

Interceptor simulation, preliminary data

Summary

- ▶ Self Protection System products exists that are easy to fit and remove
- ▶ These systems provide advanced warning and dispensing
- ▶ A Self Protection System is emerging that provide a hardkill capability, TIPS is the name
